Discussion on storm event

Happy Easter!!! No way that this is the last forecast of the season, 6 months and the last 3 have been very busy storm-wise. If you want to continue, let me know! If this is it, I hope everyone has a great summer and fall, and I'm planning to be with you again next season! There's still a lot of cloudiness in the area this morning, and the low pressure is moving into Southern California. There's more of a northerly flow aloft so still some snow showers in the area today. A drier air mass tonight and over the next couple of days with more of a feel like spring, BUT the next system will move into the area later Wednesday night and much cooler with some snow or snow showers on Thursday and Friday!!
