Discussion on storm event	<p>Another fairly nice day on the mountain, but the southeast winds continue quite breezy from mid mountain on up. A weakening system will clip us later tomorrow afternoon and evening with a chance of showers, but looking really light. Once that system exits the area, we'll have a couple of more quiet weather days. There is a shift in the pattern during the second half of next week and continues through the end of the month (probably into early May) where we'll see a couple of cooler areas of low pressure moving across the area.</p>
